

The Cardiovascular Center of Excellence,
the Department of Pharmacology &
Experimental Therapeutics and
the Department of Physiology
present:

“Mitochondrial-Produced Reactive
Oxygen Species: Signaling Intermediates
in Angiotensin II-Stimulated Neurons”

Matthew C. Zimmerman, Ph.D.

Assistant Professor,
Department of Cellular and
Integrative Physiology,
University of Nebraska Medical
Center, Omaha, NE

Thursday, February 19th, 2009

11:00 AM

MEB, 3rd Floor, Room 10

Research in Dr. Zimmerman’s laboratory focuses on the role of mitochondrial-produced reactive oxygen species in diseases associated with the central nervous system, with an emphasis on: 1) Angiotensin II-dependent neurogenic hypertension and 2) Amyotrophic lateral sclerosis (also known as Lou Gehrig’s Disease).

Co-sponsored by NIH/NCRR P20 RR018766 “Mentoring in Cardiovascular Biology”
