

Methotrexate dosing guide:

10mg of leucovorin administered po/IV q6hours, 24 hours after MTX infusion complete, then adjust to decay curve.

Expected Decay Curve

24 hours:	30-300 μ mol/L
48 hours:	3-30 μ mol/L
72 hours:	<0.3 μ mol/L

For levels in excess of the following values, increase leucovorin to 100mg/m² q6hours:

24 hours:	50 μ mol/L
48 hours:	10 μ mol/L
72 hours:	0.5 μ mol/L

Continue to follow MTX levels and continue leucovorin until MTX <0.1 μ mol/L.
