

NOLA TB TIMES

Volume 1, No 1

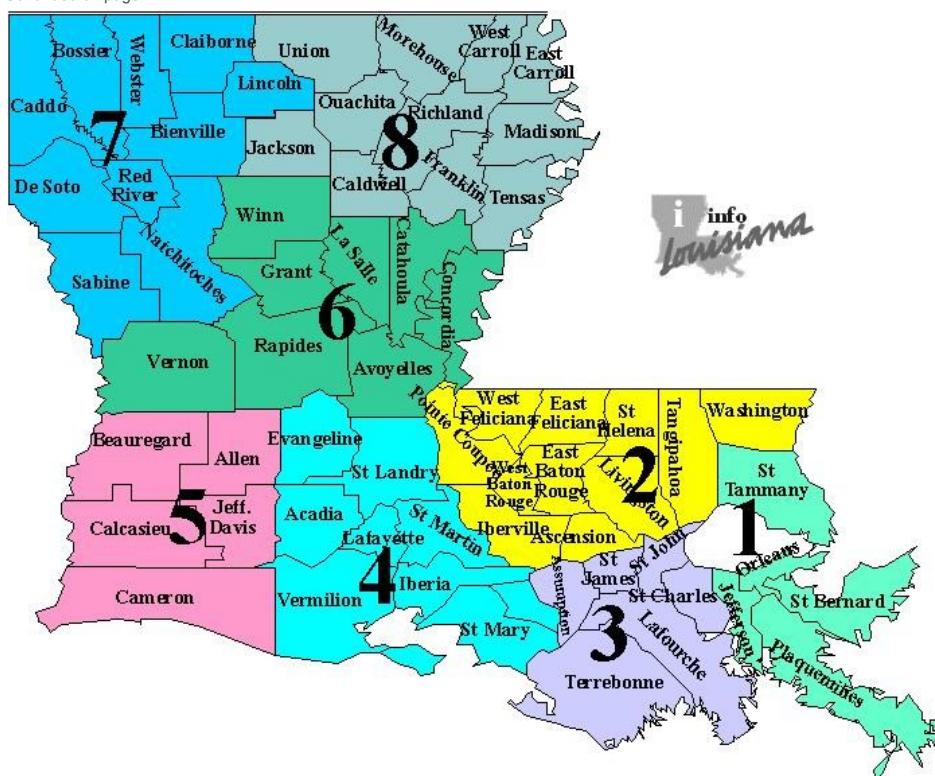

September 2015

Welcome to Wetmore Clinic

For the first time in years, tuberculosis (TB) case rates in Louisiana are lower than the national average (2.6 cases per 100,000 persons in LA in 2014 and 3 per 100,000 persons in 2013 vs. 3.0 per 100,000 persons in USA in 2013). Louisiana TB Control Program operates via 9 Regional offices based on proximity of parishes. Region 1 comprises Jefferson, Orleans, Plaquemines, and St. Bernard Parishes. This region reported a case rate of 5.4 per 100,000 persons in 2014, which is higher than the rest of regions in Louisiana and the national case rate. Growing HIV epidemic, crowded living conditions in inner city neighborhoods, homelessness, incarceration, substance abuse, migration and foreign birth are some of the major epidemiologically-related contributors to new tuberculosis diagnoses in Region 1.

At the Wetmore Clinic on Tulane Avenue in New Orleans, we serve adult and pediatric patients who have a recent diagnosis of TB infection or disease. The clinic serves individuals referred to us from various local University hospitals (inpatient and emergency room settings), local primary care clinics, community health clinics, private practices, shelters, and immigration services. We provide comprehensive TB management involving diagnosis, counseling, treatment, and prevention. The clinic offers on-site blood work performed by an experienced RN (for pre-TB medicine labs, TSPOT.TB testing, drug levels and HIV testing when indicated). GeneXpert MTB/RIF diagnostic test (TB as well as rifampin resistance) is available through the clinic. Locally, Tulane University Hospital also provides GeneXpert for timely TB diagnosis.

Welcome to Wetmore Clinic

Continued from page 1

We have a sputum collection room, a chest X-Ray machine and an expert X-Ray technician, stock of TB medicines available to our patients free-of-charge, and a range of TB experts available to provide the most detailed TB management plan for both adults and children.

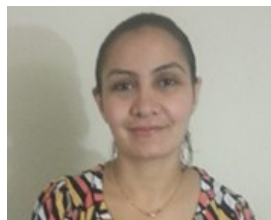

We collaborate with the University Medical Center New Orleans, Tulane University Medical Center, Tulane School of Public Health & Tropical Medicine, Louisiana State University Health Sciences Center, and industry leaders (one example, Oxford Immunotec, Inc.) to conduct evidence-based research and provide education to our students and local physicians.

The staff physicians have weekly clinics and are available for consultation as needed. Our disease intervention specialists, who are community experts, are actively involved in identifying cases, providing directly observed therapy on-site and in-field, and conduction of comprehensive contact investigations.

With this introductory newsletter, please meet our physicians and staff at the Wetmore Clinic in New Orleans. We believe that TB elimination in Louisiana is a worthy goal and an achievable goal with an active networking and collaboration with our community partners. Send us a request for your monthly newsletter from the Region 1 Wetmore TB Clinic and let's begin a partnership to end TB in Louisiana. We want your interesting TB cases, ideas and suggestions.

Sincerely,
Gayatri Mirani, MD

Important People to Note in LA TB

Louis Trachtman, MD, MPH

Medical Director,
Tuberculosis Prevention and
Control Program
504.568.5048
Email:

Louis.Trachtman@LA.GOV

With TB Program: "on and off" 45 years!
"The study of and progress made in the detection, diagnosis, treatment and prevention of tuberculosis in recent years has been both very interesting and very challenging. We know tuberculosis can be eliminated as a public health threat in Louisiana in our lifetimes. But it will still take the diligence and attention of the medical profession, the allied health professions, and the community at large to make this happen! Let's do it!"

Charles DeGraw

State TB Controller
TB Control Section
Office of Public Health
Louisiana Department of
Health & Hospitals

Our TB Clinic Physicians

Juzar Ali MD; FRCP(C); FCCP

Chief Medical Officer

LSU Health Sciences Center, Section of Pulmonary
Tulane University School of Public Health and Tropical
Medicine

Director (Clinical): Region 1, OPH; Metro- Wetmore TB
Clinics

Available: Tuesdays, from 9 am - noon

How long at the clinic: Since 1991

"TB is a patient—public health preventable and curable medical condition with social and societal overlap and challenges. We use direct care, direct observed therapy (DOT) and we need to connect the DOTS too by coordinating care at all levels."

Maggie Silio, MD, MPH

Pediatric TB Specialist

Associate Professor, Department of Pediatrics,
Section of Pediatric Infectious Diseases
Tulane University School of Medicine

How long at the clinic: Started in 1993 as a pediatric
infectious diseases fellow and became a staff
physician in 1995.

Available for pediatric cases: Tuesdays 9 am - noon

"Our clinic space may give you pause but if you have tuberculosis this is the best place to be for your treatment. We are very caring and nurturing and will keep close tabs on you and your family while going through the treatment."

Ross Klingsberg, MD
