

Course Evaluation Committee Description:

This committee monitors the courses in all four years of the medical curriculum. The committee works closely with the Curriculum Steering and Renewal Committees and with the Aesculapian Society, which presents summaries of all of its reports to the committee. The committee reviews and discusses student recommendations for course improvement, and monitors the course directors' responsiveness to those recommendations. The committee may make recommendations to department heads, the other curriculum committees or the Dean regarding the need for course improvement. The committee may also conduct its own surveys of courses or the student body for other information about the curriculum, support services, and related topics.
