

RURAL SCHOLARS TRACK SUBCOMMITTEE

The Rural Scholars Track Sub-Committee monitors the rural curriculum for the students enrolled in the RST. This includes their clinical experiences at University Medical Center as well as with their rural preceptorship. In addition, the group works to develop and improve the rural educational experience and ensure the students receive an education equivalent to that of the remainder of the students. The committee also advises and reviews students' selection of practice sites to ensure consistency and compliance with conditions of the scholarship. The Committee also assists in selection of students who desire curricular experiences that foster interest in primary care, not restricted to rural scholars.
