### Smoking and Gangrene

Smoking can lead to narrowing and hardening of the arteries, making it difficult for blood to reach the feet. The decreased blood flow can lead to ulcers and other lesions. The lack of blood supply can lead to the decay of tissue.

Gangrene occurs when necrosis, including a loss of color and blue, purple, black, or red, occurs on the feet. Patients may have a foul odor coming from the feet. Patients may experience numbness, tingling, and pain. The affected skin may be hot and dry, and the blood vessel may be narrowed.

Smoking not only contributes to developing gangrene, it also interferes with healing. Patients who smoke have a higher risk of infection and a longer time to heal. Quitting smoking and increasing the use of developing a good diet.

**Smoking and Gangrene**

Smoking can lead to narrowing and hardening of the arteries. This is difficult for blood to flow through and can lead to heart disease, stroke, and other health problems. The lack of blood flow can lead to the death of tissue.

Gangrene causes cell death and is a serious condition. It can lead to the loss of limbs and even death. It is caused by a lack of blood flow to the affected area. This can be caused by smoking, diabetes, and other health problems. The affected area will turn black and the smell is very foul. Amputation may be necessary.

Smoking has many health benefits. It can help to prevent heart disease, stroke, and other health problems. It can also help to prevent cancer and other health problems. Smoking can help to prevent the spread of HIV and other health problems. Smoking can help to prevent the spread of tuberculosis and other health problems. Smoking can help to prevent the spread of hepatitis and other health problems. Smoking can help to prevent the spread of malaria and other health problems. Smoking can help to prevent the spread of dengue fever and other health problems. Smoking can help to prevent the spread of Zika virus and other health problems. Smoking can help to prevent the spread of chikungunya and other health problems. Smoking can help to prevent the spread of Zika virus and other health problems. Smoking can help to prevent the spread of chikungunya and other health problems.
