

PROSPECTIVE NATURAL HISTORY STUDY OF FUNCTIONAL VISION and BALANCE in USHER SYNDROME

A Prospective Natural History Study of Functional Vision and Balance in Usher Syndrome is being conducted to assist in the development of treatments.

Natural History Studies allow researchers and clinicians to understand disease progression so that they can develop new ways to diagnose, manage, and develop new treatments.

The information collected for this study will include a novel virtual reality test, as well as questionnaires. Participants will be required to travel to New Orleans (Louisiana, USA) and confidentiality will be maintained.

TO PARTICIPATE IN THIS STUDY

Please contact Dr. Jennifer Lentz at 504-599-0400 or jlentz@lsuhsc.edu.

OPEN TO ALL USHER TYPES

USH1

USH2

USH3

USH4

Atypical-USH

TESTING LOCATION

Human Development
Center, LSUHSC, New
Orleans, LA

BENEFITS TO PATIENTS

Provide Valuable
Information to the Usher
Research Community
