

Usher Syndrome in Louisiana Natural History Study

Louisiana State University Health Sciences Center in New Orleans is conducting a Natural History Study of the Usher syndrome community in Louisiana to assist in the development of treatments and to raise awareness of the syndrome.

The information needed for this study will include hearing and vision records, questionnaires, and genetic testing. Participants will not be required travel and confidentiality will be maintained.

If you or someone you know has Usher syndrome and would like to take part in this important study, please contact Dr. Jennifer Lentz at 504-599-0400 or jlentz@lsuhsc.edu or return the card below for more information.

A Natural History Study allows researchers and clinicians to understand diseases so they can develop new ways to diagnose, prevent or treat the disease.

Usher syndrome is the leading genetic cause of deaf blindness and is more prevalent in the Louisiana Acadiana population.

Yes, I would like more information about the Natural History Study being conducted by LSU Health Sciences Center in New Orleans.
