

# Departmental News

Department of Pediatrics ~ LSUMC New Orleans

## KUDOS CORNER

Kenneth Paris, MD, MPH

**Ken Paris, MD, MPH** has been named the Program Director for the LSU Allergy/Immunology Fellowship Program. Dr. Paris has been assisting Dr. Cleveland Moore in this position and has now taken over all responsibilities. Congratulations to Dr. Paris!

Congratulations also go out to Pediatrics Chairman, **Ricardo Sorensen, MD**, who received an Honorary Professorship from the Medical School of the Universidad de la Frontera in Temuco, Chile last month. Only five individuals have received this honor in 50 years. The honor was conferred upon Dr. Sergio Stagno, Chair of Pediatrics at the University of Alabama in Birmingham, five years ago.

Dr. Sorensen also traveled to Cartagena, Colombia in October to give the keynote address at the First Meeting of the Latin American Society for Primary Immunodeficiencies (LASID), an organization he founded. LASID has had a long, remarkable journey that started as an informal group put together at a meeting of the Latin American Immunological Society in 1993. After a long period of time seeking legal status as a Foundation, LASID is now poised to promote the cause of Primary Immunodeficiency Diseases and to help diagnose patients affected by them throughout Latin America. **Lily Leiva, PhD**, Associate Professor of Research, also participated in the meetings with a talk titled "LASID: Laboratory Networks for Latin America."

Kudos to **Michael Ferris, PhD, Duna Penn, MD** and **Lynn Tran, MD** who received some good news regarding their Cooperative Research Pilot Grant titled "*Fecal Microbiota in Infants With and Without Necrotizing Enterocolitis.*" The South Louisiana Institute for Infectious Disease Research has extended the award into a second year for \$73,902.

**Eduardo Davila, PhD**, Assistant Professor of Pediatrics, received a recent NIH award funded through the American Recovery and Reinvestment Act. "Antitumor Effects of TIR5 Ligand-producing T cells" was awarded \$344,630 per year for 2 years. With the help of Dr. Adam Riker of Ochsner Hospital and **Augusto Ochoa, MD**, Dr. Davila will test the hypothesis that genetically modifying human tumor-specific T cells to express Toll-like receptor-5 (TLR) and engineered to produce the TLR5 ligand will generate potent and long-lived antitumor activity by costimulating both tumor-specific T cells and antigen presenting cells. The contributors recently published a book chapter (in print; "A Toll Bridge for T cells" J. Lustgarten et al. (eds.), *Targeted Cancer Immune Therapy*, DOI 10.1007/978-1-4419-0170-5\_10, © Springer Science+Business Media, LLC 2009) and a review article (<http://www.futuremedicine.com/toc/imt/1/6>) describing the project's concepts (immune-based cancer therapy) and would be happy to share these with Pediatrics Faculty.

## HAPPY HOLIDAYS!

---

## PUBLICATIONS AND PRESENTATIONS

Yves Lacassie, MD

**Yves Lacassie, MD** has co-authored "Hereditary Cutaneomucosal Venous Malformations Are Caused by TIE2 Mutations with Widely Variable Hyper-Phosphorylating Effects" which was published in the *European Journal of Human Genetics* last month.

*The American Journal of Medical Genetics* will publish several articles written by Pediatrics Faculty. Pathology's **Robin McGoey, MD** and Dr. Lacassie co-authored a paper that ran in the November issue titled "Paternal Balanced Reciprocal Translocation t(9;22)(q34.3;q11.2) Resulting in an Infant with Features of the 9q Subtelomere and the 22q11 Deletion Syndromes Due to 3:1 Meiotic Segregation and Tertiary Monosomy." The *AJMG* will also publish the pair's paper titled "Multiple Genomic Imbalances Detected in a Single Family by Array Comparative Genomic Hybridization: Novel Complexities for the Clinician."

**Dr. Lacassie, Malektaj Yazdani, MD, and Brian Barkemeyer, MD** collaborated on "An Unusual Phenotypic Presentation of Trisomy 18" for the *AJMG*. The letter to the editor is currently in press.

**Dr. Lacassie** also traveled to Hawaii in October to present at the American Society of Human Genetics' 59<sup>th</sup> Annual Meeting. The title of his talk was "Hand Dymorphology: Dermatoglyphics\* A Neglected Clue to Suspect Microdeletions." Dr. Lacassie collaborated with two medical students on this project. Victoria Myrtle and Shyam Sathyamorthi are also volunteers at Children's Hospital. Dr. Lacassie was also a co-presenter for a talk titled "A Recurrent 16p12.1 Microdeletion Modifies Neurobehavioral Phenotypes."

## JEFFREY MODELL FOUNDATION EVENTS

The Jeffrey Modell Diagnostic Center for Primary Immunodeficiencies in New Orleans sponsored several important events during the month of November focused on primary immunodeficiency diseases. The first was a forum titled "Planning the Future of Neonatal Screening for Primary Immunodeficiency Diseases". The event, moderated by **Ricardo Sorensen, MD** and **Seth Pincus, MD**, aimed to define the criteria that must be met to allow neonatal screening for PID to be incorporated into the national newborn screening program. Representatives from the CDC, local experts, and Representative Gary L. Smith of the Louisiana House of Representatives participated in the discussion. A total of 12 discussants and 44 observers attended the forum.

The Fourth Annual Jeffrey Modell CME Course for the General Practitioner, held November 13<sup>th</sup> at Harrah's New Orleans Hotel, focused on neonatal screening and the molecular diagnosis of primary immunodeficiency diseases. Several out-of-town guests spoke at the event, including representatives from the CDC and the New England Newborn Screening Program. Fred and Vicki Modell, co-founders of the Jeffrey Modell Foundation, also participated. **Ricardo Sorensen, MD, Seth Pincus, MD, Kenneth Paris, MD, MPH** as well as Allergy/Immunology Fellows **Gital Karamchandani, MD, Tammy Harvey, DO, and Cecilia Poli, MD** also presented at the CME course. Eighty interested physicians and scientists attended the symposium.

The Jeffrey Modell Center also sponsored the Fourth Annual Kids' Day at the Audubon Aquarium of the Americas on Saturday, November 14<sup>th</sup>. Over 100 parents, friends and kids (the biggest crowd yet!), many with primary immunodeficiency diseases, explored the aquariums full of sea creatures and received a special visit from one of the resident penguins. Dr. Ken Paris coordinated the event. He and the rest of the Allergy/Immunology Division partied along with the kids.

The Jeffrey Modell Foundation supported each of these events.

## WELCOME TO NEW FACULTY

**Kelly Gajewski, MD** is the newest member of the Cardiology Division. She joined the group earlier this month as an Assistant Professor specializing in Pediatric Electrophysiology. Dr. Gajewski received her

MD and completed her Residency from Johns Hopkins University School of Medicine. She completed two fellowships at the Medical University of South Carolina in Charleston. Her first was a three-year fellowship in Pediatric Cardiology and the second was a one-year fellowship in Pediatric Electrophysiology. Welcome aboard, Dr. Gajewski!

**Sarah Stender, MD** joined the Endocrinology Division this month as an Associate Professor of Pediatrics. Dr. Stender recently moved from Memphis, Tennessee where she served as Pediatric Diabetologist on the faculty of the Department of Pediatrics at the University of Tennessee in Memphis. She has considerable expertise in helping young patients and their families cope and succeed in day to day management of health challenges related to diabetes and prevention of diabetes complications. The addition of Dr. Stender will help expand her division's clinical services for children with diabetes and pre-diabetes as well as their families.

The Allergy/Immunology Division welcomed **Victoria Dimitriades, MD** as Assistant Professor of Clinical Pediatrics in October. Dr. Dimitriades finished her A/I fellowship at LSUHSC and Children's Hospital earlier this year. She graduated from the University of Miami School of Medicine and completed her Residency at St. Christopher's Hospital for Children in Philadelphia. Congratulations are also in order for Dr. Dimitriades. She and her husband, Costa Dimitriades, MD of the Critical Care Division, are expecting their second child early next year.

## JANUARY SUBMISSIONS

Please send your submissions for the next issue of the newsletter to Kelly Allerton. You can reach Kelly by telephone (896-9800), fax (896-2720), or email (kslumb@lsuhsc.edu).

## THE NEWEST SAINTS FAN

**Robin English, MD** and her husband, Tim, welcomed their new baby girl on November 14<sup>th</sup>. Ellen Elizabeth Dilligan weighed 5 lbs, 13 oz. Congratulations on your new addition!

## UPCOMING EVENTS

**December 11 Faculty Meeting,  
Tower 2 Center**

**December 12 Holiday Celebration,  
1237 State Street**

**December 24- Christmas Holidays  
January 1**

**January 26 House Officer's  
Subspecialty Core  
Curriculum –  
"Leadership Skills for the  
Medical Learning Team"**

**GEAUX  
SAINTS!**

***From the desks of Bonnie Desselle, MD and Rachel Dawkins, MD....***

The following article is the first of many "Faculty Development" sections which will be featured in each month's newsletter.

## **Too little time to teach? Try the One Minute Preceptor!**

The One Minute Preceptor is a five step technique which can be used in a variety of clinical settings. This technique encourages critical thinking by the learner and can help the teacher assess where the learner is in the clinical reasoning process. It also reminds preceptors to provide feedback.

Try this technique after a patient presentation.

### **Step One: Get a Commitment!**

- A question such as "What do you think is happening here?" or "What would be your treatment plan?" helps the learner commit to a diagnosis or treatment option, rather than simply going along with the preceptor's plans.
- Avoid prompting or suggesting a diagnosis or treatment plan at this point

### **Step Two: Probe for supporting evidence**

- What was the learner's thought process? Was this a lucky guess?
- Probing questions such as "Were there any other alternatives you considered?" or "What made you rule out \_\_\_\_\_?" are helpful.
- This is a great time to ask WHY questions too: "Why would you chose that medication?" "Why would you like that lab test?"

### **Step Three: Reinforce what was done right**

- Comments should include specific behaviors that demonstrated knowledge skills or attitudes valued by the preceptor
- Example: "You did a good job of \_\_\_\_\_, and this is important because \_\_\_\_\_"

### **Step Four: Correct Mistakes**

- As it is important for the learner to know what they have done well, it is just as important to learn what needs improvement.
- Again comments should be as specific as possible and try to give guidance on alternative actions or behaviors the learners could use in the future.
- Describe what was wrong, and identify how to avoid and correct the error. Example: "In your patient presentation, you forgot to tell me about the physical exam until after your assessment. In the future, organizing your presentation differently will be helpful" or "Your choice to order X lab test is not correct in this instance, instead we should order Y tests for this type of patient."

### **Step Five: Teach general rules**

- Find a practical teaching point (or two) that can be applied to other clinical situations
- Examples: "When this happens, do this..." or "The key features of this illness are..."

This entire process should take no more than ten minutes including the patient presentation. You may choose to rearrange some of these steps. The One Minute Preceptor will hopefully help you maximize your time available for teaching both medical students and residents.
