

Study of Insulin sensitivity in Low-birthweight Louisiana Youth (**The SILLY Study**)

The **SILLY** study considers the significance of birth weight for the later development of diabetes and other metabolic problems. All boys and girls ages 7 to 9 are eligible to participate in this study, even those with average and high birth weights.

Louisiana State University Health Sciences Center and The Clinical Trials Center at Children's Hospital are looking for 7 to 9 year olds to participate in this health evaluation study.

Participants will receive a FREE health screening including:

- Blood pressure
- Cholesterol
- Body fat estimate
- Free diabetes risk evaluation
- Compensation for time and travel

Please call toll-free 1-866-92-SILLY to see if you qualify.

Come learn more about the SILLY study at our family nutrition and exercise sessions. These sessions are on the first Monday of each month and are held in the auditorium at Children's Hospital in New Orleans. Please call 1-866-927-4559 for more information on our programs.
